# 2023 BOARD SLATE

## Tier 1 candidates (electing five seats):

- Beilstein-Institut, Wendy Patterson
- Korean Council of Science Editors, Kihong Kim
- Lujosh Ventures Limited, Olu Joshua
- NISC Ltd, Mike Schramm
- OpenEdition, Marin Dacos
- Universidad Autónoma de Chile, Dr. Ivan Suazo
- Vilnius University, Vincas Grigas

## Tier 2 candidates (electing two seats):

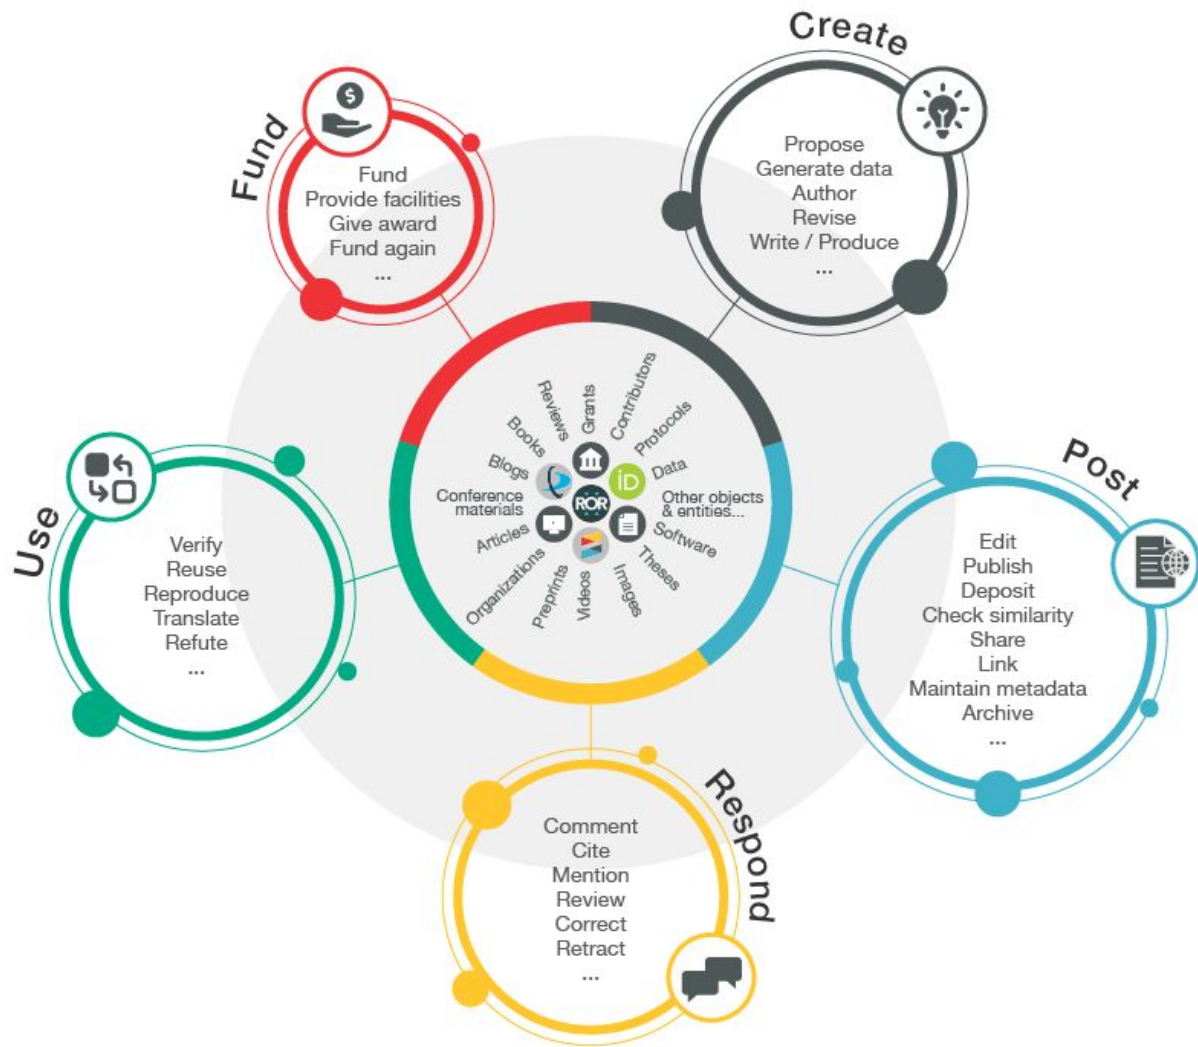

- Association for Computing Machinery (ACM), Scott Delman
- Oxford University Press, James Phillpotts
- Public Library of Science (PLOS), Dan Shanahan
- University of Chicago Press, Ashley Towne

**Voting closes at 13:00 UTC**

Email [lucy@crossref.org](mailto:lucy@crossref.org) if you still need to place or change your vote.

# THE LATEST ON THE RESEARCH NEXUS

# WHAT WE'RE AIMING FOR

- Bringing together the disparate parts of the scholarly record
- Better view of relationships (beyond PIDs)
- Exposing internal stuff publicly
- Enabling multi-party assertions
- Evidence. Provenance. Persistence.
- **60% of this is possible, the rest is aspirational**

# THE SCALE OF CROSSREF INFRASTRUCTURE

- **>19,000** organisational members from **152** countries
- **>150** million open metadata records with a DOI
- **1.1 billion** DOI resolutions every month
- **000s** (?) systems reusing metadata through search/API and **1.2 billion** queries every month (up from 607mil in 2018)
- **150** Sponsor orgs; **50** Ambassadors
- **\$1,150,000** on data storage and processing alone in 2024
- **47** staff across **7** time zones and **10** countries

<b>Records</b>	<b>As of Oct 2018</b>	<b>As of Oct 2023</b>	<b>% change</b>
Total records registered	100,774,749	151,255,483	50%
Number of Journals	62,226	123,336	98%
Number of Journal articles	73,957,459	102,775,406	105%
Number of Books	1,285,818	1,913,683	49%
Number of Book-related records	14,288,511	24,576,712	72%
Number of Conference proceedings	62,190	105,077	69%
Number of Conference papers	5,477,054	8,125,166	48%
Number of Preprints	79,084	1,637,103	1970%
Number of Reports	586,195	746,921	27%
Number of Peer reviews	13,456	421,782	3035%
Number of Standards	257,470	378,946	47%
Number of Components	3,454,155	7,865,443	128%
Number of Databases	21,806	63,926	193%
Number of Database-related records	1,704,946	2,919,950	71%
Number of Dissertations	240,407	618,951	157%
Number of Grants	6	87,259	1454217%

Growth slowing gradually over the years from 13% 7-8 years ago, to 10% 3-4 years ago, to now under 8% from 2022-23

Preprints still growing, particularly from American Association for Cancer Research (AACR)

Peer review reports also growing, this is typical growth the last few years

Grant records have more than doubled, thanks to the European Commission

<b>Research Nexus connections</b>	<b>As of Oct 2018</b>	<b>As of Oct 2023</b>	<b>% change</b>
Records with references	41,516,410	66,508,539	60%
Number of Cited-by matches	758,372,968	1,542,481,107	103%
Number of Preprint-to-article links	17,883	555,134	3004%
Number of unique records with Funder IDs	2,431,939	8,099,744	233%
Records with one or more authors with ORCID iDs	1,950,216	12,114,204	521%
Total unique ORCID iDs	1,293,649	6,093,373	371%
Total works auto-pushed to ORCID	1,363,337	16,256,452	1092%
Records with abstracts	2,707,893	26,814,551	890%
Records with ROR IDs	n/a	73,560	n/a
Records with Crossmark	7,747,598	25,013,338	223%
Crossmark status updates	93,223	267,583	187%
Crossmark retractions	4,477	14,004	213%
Crossmark popup displays (av. per month)			
<b>Research Nexus adoption</b>	<b>As of Oct 2018</b>	<b>As of Oct 2023</b>	<b>% change</b>
Members registering references	4,636	10,158	119%
Members registering abstracts	3,645	22,312	512%
Members participating in Crossmark	324	516	59%
Members registering ORCID iDs	3,645	15,154	316%
Members registering ROR IDs	n/a	290	n/a
Members registering Funder IDs	746	2,161	190%

Preprint to article links rising

ORCID Auto-update going well. And we reached 3 million authors granting us permission

No. retractions still very small (compared to RW) and No. members using Crossmark still small

The I4OA message is starting to get traction. Wiley!

## Shooting for the stars – ASM's journey towards complete metadata

[Kornelia Korzec](#), [David Haber](#), [Deborah Plavin](#) – 2023 March 14  
In [Metadata](#), [Community](#), [Publishing](#), [Research Nexus](#), [Content Registration](#)

At Crossref, we care a lot about the completeness and quality of metadata. Gathering robust metadata from across the global network of scholarly communication is essential for effective co-creation of the research nexus and making the inner workings of academia traceable and transparent. We invest time in community initiatives such as [Metadata 20/20](#) and [Better Together webinars](#). We encourage members to take time to look up their [participation reports](#), and [our team can support you](#) if you're looking to understand and improve any aspects of metadata coverage of your content.

In 2022, we have observed with delight the growth of one of our members from basic coverage of their publications to over 90% in most areas, and no less than 70% of the corpus is covered by all key types of metadata Crossref enables (see [their own participation report](#) for details). Here, Deborah Plavin and David Haber share the story of ASM's success and lessons learnt along the way.

## Crossref Member Metadata Metrics

### Member Metrics Tables

This is a [Crossref Labs Project](#). You have been warned.

That being said, [please report any issues](#).

And the [source code](#) is on Gitlab.

Data last refreshed: Tue Oct 31 03:06:06 2023

### Metadata coverage data for 22,418 Crossref members

## ORFG Advances Efforts to Improve Research Output Tracking

JUNE 5, 2023

In June of 2022, the Open Research Funders Group (ORFG) [launched a public effort](#) to improve research output tracking. We began by publishing an [open letter](#) to the community, outlining priority areas such as persistent identifiers (PIDs) and machine readable metadata, and recommended actions for funders, publishers, infrastructure providers, and other key actors. We then opened up a survey to receive community feedback, and [reported publicly](#) on the results in September of 2022. Later that same month, we began holding regular [open community calls](#) to bring together diverse actors across the research ecosystem and discuss possible workstreams. Our community calls – four in total to date – have consistently had good engagement, with 40–50 participants per session.

[orfg.org/news/2023/6/5/orfg-advances-efforts-to-improve-research-output-tracking](https://orfg.org/news/2023/6/5/orfg-advances-efforts-to-improve-research-output-tracking)

**OA Switchboard research funder pilot successfully completed**  
*Group of 25 research funders and publishers collaborated in experimental project to get 'hidden' research funding information out of publications and shared*

18 July 2023 by Yvonne Campfens, Executive Director OA Switchboard

In June we successfully concluded the pilot that aimed to get 'hidden' research funding information out of publications and shared. This experimental project is also known as the 2022 Next Level Funder Pilot, in which a group of 25 research funders and publishers collaborated to unlock funding information to progress open access (see [7 March blog post](#)). The initial results were overwhelming and encouraging! And there is more work to be done to fully capitalise on the results.

# Including ROR as a funder identifier in your metadata

Questions from Crossref ror, grants, funder-registry, labs,  PFeeney

**PFeeney**  Crossref team

18h

As many of you know, the [Open Funder Registry will transition into the ROR Registry](#) . We will be supporting ROR IDs instead of Funder IDs in Crossref metadata record registration soon but first would like to test the process using our Labs metadata pipeline and need your XML - we've done some internal testing but as we all know the fun doesn't really begin until we have real-world metadata records to ingest. We'll have an API available soon but for our initial round of testing we'd like to upload your XML ourselves to work out any problems in advance.

If you collect ROR identifiers and want to include them as funder identifiers, details on the changes and logic are available [in this document], or feel free to contact us with any questions or comments.

# GLOBAL EQUITABLE MEMBERSHIP (GEM) PROGRAM

- 59 countries covered, based on International Development Association data
- >350 GEM members since January 2023
- Goal is to include as much research as possible in the global scholarly record
- Only necessary because our fee model hasn't kept up with how our community has evolved
- "Rightsizing Crossref" consultation project in 2024 to include fee remodelling

# Making data citations available at scale: The Global Open Data Citation Corpus

**Iratxe Puebla**

Director of Make Data Count at DataCite  
Crossref annual meeting  
31 October 2023

@datacite  
@makedatacount

@makedatacount@openbiblio.social

# Data sharing is valuable, but what value do we assign to data sharing?

## To nurture data sharing, we need to make it rewarding

There is currently a lack of incentives ⇨ Research assessment frameworks often focus on publications and do not include data

As a result, researchers perceive data sharing as a burden that brings little professional benefit

“I don't have time. [...] It's not incentivized either [...] so why would I spend some time on something where it really amounts to no recognition [...]. People who are in this community might think I'm a good person [...] and that's fine. I can accept that. But I'm not going to track it, necessarily, because it doesn't amount to anything that's recognized.”

*Professor, Anesthesiology, Canada*

# Make Data Count

Make Data Count is an initiative that **promotes open data metrics** to enable **evaluation and reward of research data** usage and impact.

Data metrics should be:

- Community led
- Open
- Contextualized

Make Data Count leads projects to drive adoption of data usage metrics, including open infrastructure, best practices and outreach.

## The COUNTER Code of Practice for Research Data

The Code of Practice for Research Data Usage Metrics standardizes the generation and distribution of usage metrics for research data, enabling for the first time the consistent and credible reporting of research data usage.

COUNTER welcomes input and feedback from the community on this first iteration, so that it can be further developed and refined.

A downloadable PDF is now available in the download section below.

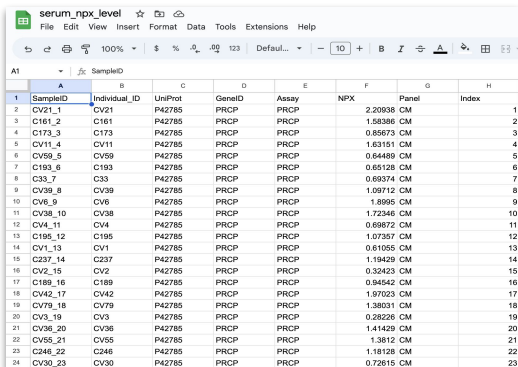

[makedatacount.org/about-us/](https://makedatacount.org/about-us/)

# Data Citations

Data citations are one measure of data usage: they provide a link between the dataset and another research object, clearly pointing to the data being used or reused in research.

Data citations are useful:

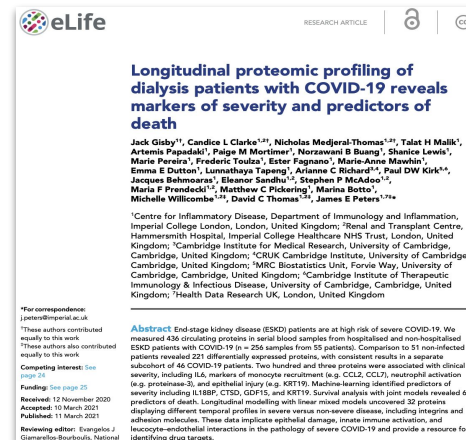

- Valued by researchers
- Work has been done to develop workflows (at repository & publishers) and AI tools to identify data citations

**Abstract** End-stage kidney disease (ESKD) patients are at high risk of severe COVID-19. We measured 436 circulating proteins in serial blood samples from hospitalised and non-hospitalised ESKD patients with COVID-19 (n = 256 samples from 55 patients). Comparison to 51 non-infected patients revealed 221 differentially expressed proteins, with consistent results in a separate subcohort of 46 COVID-19 patients. Two hundred and three proteins were associated with clinical severity including IgA, markers of monocyte recruitment (e.g. CCL2, CCL3), neutrophil activation (e.g. proteinase-3), and epithelial injury (e.g. KRT19). Machine-learning identified predictors of severity including IL18P, CTS2, GDF15, and KRT19. Survival analysis with joint models revealed 49 predictors of death. Longitudinal modelling with linear mixed models uncovered 32 proteins displaying different temporal profiles in severe versus non-severe disease, including integrin and adhesion molecules. These data implicate epithelial damage, innate immune activation, and leucocyte-endothelial interactions in the pathology of severe COVID-19 and provide a resource for identifying drug targets.

# Who Cares? Defining Citation Style in Scholarly Journals

**Vincas Grigas, Pavla Vizváry**

Vilnius University, Lithuania

Masaryk University, Czech Republic

**#Crossref2023:**

Updates from the community

# Hello!

Quote by Dr. Ian Malcolm:

“Your scientists were so preoccupied with whether or not they could, they didn’t stop to think if they should.”

Academic publishing and the labyrinth of citation styles.

The number in the Zotero Style Repository: 10,377!

# Challenges

Challenges faced by authors:

- Finding the correct citation style.
- Locating it in their citation manager.
- Ensuring correct referencing.

# Use of DOIs

## Observation

- Only half of the articles registered in Crossref provide reference lists with article metadata.
- Crossref's recognition of references depends on the provision of DOIs in references.
- Do journals require the provision of DOIs in references?

# Why and what?

## **Goal of the study:**

- Understand journal practices for citation guidelines.

## **Method:**

- Analyzed 270 high-quality journals from Scopus (distribution by region).

## **Objectives:**

- Prevalence of citation styles.
- How journals set citation style guidelines.
- Mandate of DOIs in references.

# Results

- 54.1% of journals don't specify a citation style.
- Rankings of styles:
  - APA: 18.1%
  - Vancouver, Harvard, Chicago: 6.3% to 4.8%
  - ISO 690 and AMA: 4.1% and 3.3%

# ChatGPT analysis

## Findings

### Assessment goal:

- Determine conformity of unnamed reference styles.

### Findings:

- Presence of known styles, but with slight modifications.

### Implications:

- Complications with reference managers due to modified styles.

# Concerns and impacts

## **The "unnamed" approach:**

- More complexity for authors and potential incorrect formatting.

## **DOIs as a solution:**

- 41.1% of journals request DOIs.
- 78.1% include DOIs in reference lists.

## **Additional insights**

- No significant impact based on the country of origin.
- Influence is related to the journal's scientific field.
- No attention to reference styles.
- Lack of requirements to include DOIs.

## **Conclusion & Recommendations**

- Need for standardization or clear guidelines.
- Emphasize the importance of DOIs in improving the referencing system.
- Need for education among journals and authors.

# FLASH TALKS

- Martin Fenner, Front Matter

# DOI registration for scholarly blogs

**Martin Fenner**, Front Matter, Münster, Germany,

<https://orcid.org/0000-0003-1419-2405>

Scholarly blogs are an essential part of scholarly communication, but have not yet become a formal part of the scholarly record.

Here we present initial work on content registration for scholar blog posts with Crossref DOIs, named Rogue Scholar (<https://rogue-scholar.org>). We explored the interest by the scholarly community, the technical challenges, and the costs associated with building and maintaining this infrastructure.

# Introduction

Blogs are a technology to publish content on the web that became popular in the early 2000s. Common functionalities include serial publication as *posts*, and *feeds* in RSS or Atom formats to automatically consume content and metadata.

The most common platform is Wordpress, but there are many open source and commercial alternatives.

The technology has been widely used to publish scholarly content, but with a few exceptions has not been integrated with traditional scholarly publishing efforts, including the use of persistent identifiers and standard metadata, and efforts on long-term preservation.

# Use Cases

Scholarly blogs are a particularly good fit for some scholarly publishing use cases:

- Individual researchers self-publishing their work, or providing feedback on published work.
- Emerging publication efforts with limited resources.
- Provide context, e.g. editorials or perspectives, for other publication formats such as preprints, datasets, software, or traditional research articles.
- Front matter content from organizations or projects, e.g. news or announcements.

# Initial Work

**January 2023.** Announced Rogue Scholar project, and opened a waitlist for interested blogs.

**April 2023.** Launched the initial service with support for importing blogs via RSS, Atom and JSON Feed.

**June 2023.** Started DOI registration and full-text search. Started extracting references from full-text. Twenty science blogs included.

**August 2023.** Added automated signup via user accounts. Launched payment system for larger blogs and donations.

**September 2023.** Added support for retrieving blog posts via API (Wordpress, Ghost, Substack). Initial Fediverse (Mastodon) integration. Fifty science blogs included.

**October 2023.** Launched initial version of a dedicated API. (<https://api.rogue-scholar.org>).

# Results

DOI registration for scholarly blogs is feasible, cost-effective and of interest to the scholarly community, with close to 10,000 (9,139 as of October 19, 2023) blog posts from 63 blogs , using 12 different platforms in 4 languages, registered in less than six months.

DOI registrations work with existing blogs and don't require technical work by the blog (some configuration changes are helpful).

DOI registration includes rich metadata without major efforts by participating blogs, including abstract, license, language, ORCID IDs, references, and relationships (e.g. *IsIdenticalTo*, *IsTranslationOf*).

By requiring full-text content with an open license (CC-BY) and providing an open API, additional services reusing and mixing content are possible and encouraged. The first such service is a central full-text search.

# Future Work

- **Long-term archiving with the Internet Archive**

Signed up with the Internet Archive Archive-It service for long-term archiving of all participating blogs.

- **Improve and better document the open API**

Further work on the dedicated API that was launched in October, including better integration with participating blogs, and additional metadata conversions.

- **Other output formats**

Started working with the Zenodo open repository to provide blog posts in other formats, including PDF and ePub.

# Wish List for Crossref

Going forward, the following improvements could make it easier to register scholarly blog posts as content with Crossref:

- Encourage other Crossref sponsors to work with science blogs.
- Add support for the content type *Blog Post* as sub-type of *Posted Content*.
- Add support for container name (the blog name) and container ID (e.g. ISSN and/or DOI) to *Posted Content* metadata.
- Consider adding *Feature Image* (optional, string), the URL of the main image for the content, to *Posted Content* metadata.

# FLASH TALKS

# Horizon Europe

- Horizon Europe is the **EU's key funding programme** for research and innovation
- It tackles **climate change**, helps to achieve the **UN's Sustainable Development Goals** and boosts the **EU's competitiveness and growth.**
- Programme duration: 2021-2027
- Total budget 2021-2027: € 95.51 billion

## Why DOIs for Grants?

- An **internal discussion** on the use of grant IDs lead in an agreement that the European Commission (EC) should issue grant IDs for Horizon Europe.
- The overall purpose for the EC is **to contribute** to the general **development of PIDs** in a mid- and long-term timescale.
- The idea underpinning this effort is that **the availability of PIDs** will become an important factor in the steering and evaluation of **R&I Policies**.

# Key Use Case of DOIs for Grants

- **Evaluation and monitoring** of the **impact** of the framework programme.
- Better **links between grants and related publications**, including other research outputs such as patents, prototypes, software components, etc
- **Objective**: Simplified analysis when the link is declared via a PID instead of as free-form text

# Another One..?

**Each of the existing tools serves a different set of use cases.  
Each of the existing tools has critical limitations.**

With the new content registration tool, we aim to:

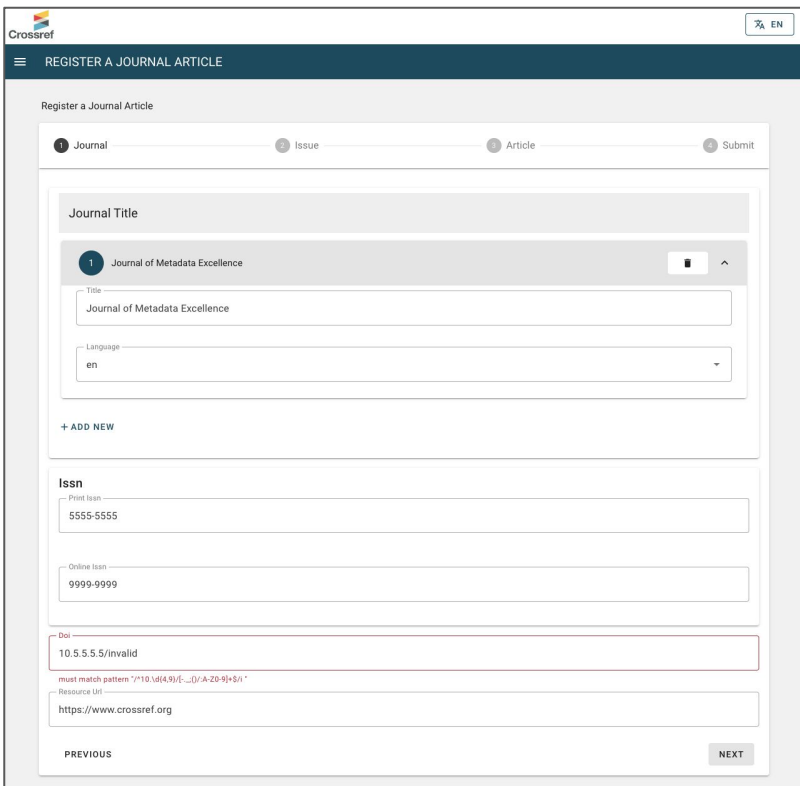

- Build on a flexible, scalable, and schema-driven framework
- Unify multiple disparate user interfaces
- Offer a localisable and accessible user experience

<https://www.crossref.org/blog/next-steps-for-content-registration/>

# Sneak Peek at the New Tool

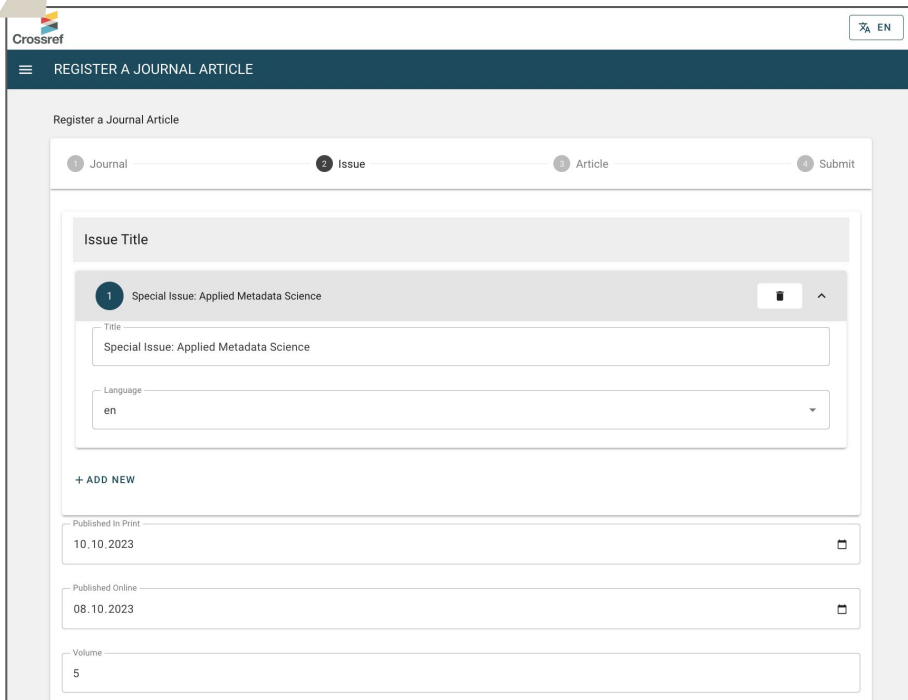

The screenshot shows the 'REGISTER A JOURNAL ARTICLE' form on the Crossref website. The form is titled 'Register a Journal Article' and has a progress indicator with four steps: 'Journal' (selected), 'Issue', 'Article', and 'Submit'. The 'Journal' section includes a 'Journal Title' field with a dropdown menu showing '1 Journal of Metadata Excellence', a 'Title' field with 'Journal of Metadata Excellence', and a 'Language' dropdown with 'en'. Below this is a '+ ADD NEW' button. The 'Issn' section has 'Print Issn' (5555-5555) and 'Online Issn' (9999-9999) fields. The 'Doi' field contains '10.5.5.5/invalid' and a red error message: 'must match pattern: /^(10.5|4.0|E\_|\_|/A-Z0-9)+\$/'. The 'Resource Url' field contains 'https://www.crossref.org'. At the bottom, there are 'PREVIOUS' and 'NEXT' buttons.

- Focus on key metadata fields
- Input validation to combat human error
- Localisable and accessible by design

# Sneak Peek at the New Tool

The screenshot shows the 'REGISTER A JOURNAL ARTICLE' form in the Crossref interface. The form is titled 'Register a Journal Article' and has a progress indicator with four steps: 1. Journal, 2. Issue, 3. Article, and 4. Submit. The 'Issue' step is currently active. The form includes the following fields:

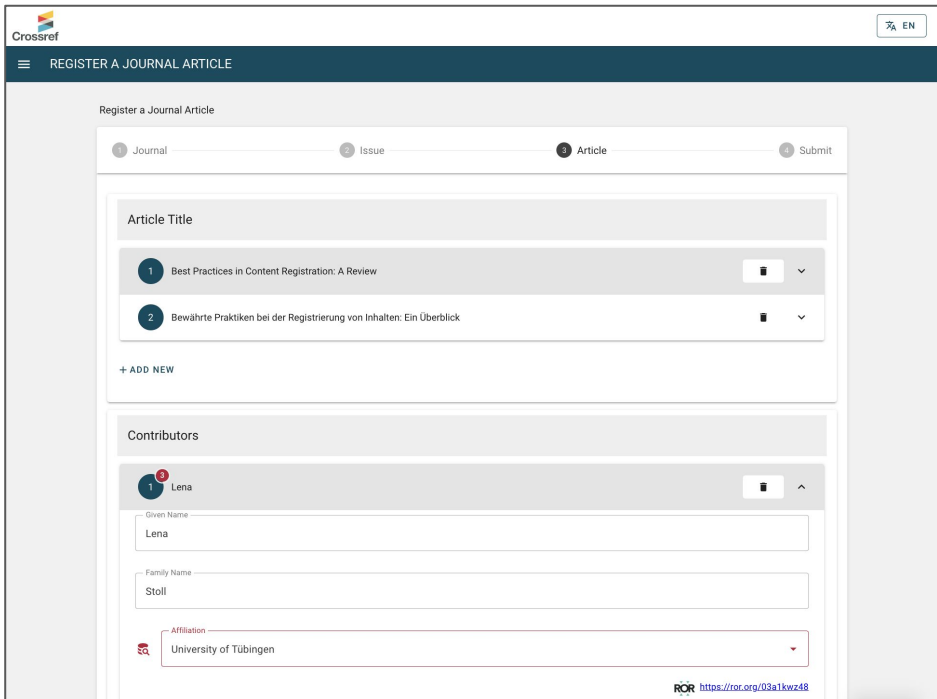

- Issue Title:** A dropdown menu showing 'Special Issue: Applied Metadata Science' with a plus icon and an upward arrow.
- Title:** A text input field containing 'Special Issue: Applied Metadata Science'.
- Language:** A dropdown menu showing 'en'.
- + ADD NEW:** A button to add new entries.
- Published In Print:** A date input field containing '10.10.2023'.
- Published Online:** A date input field containing '08.10.2023'.
- Volume:** A text input field containing '5'.

The Crossref logo is visible in the top left corner, and a language selector 'EN' is in the top right corner.

/swagger-docs

Explore

## Crossref Unified Resource API <sup>0.1</sup>

[/swagger-docs](#)

### Preamble

The Crossref REST API is one of [a variety of tools and APIs](#) that allow anybody to search and reuse our members' metadata in sophisticated ways.

If you read nothing else, please at least look at the [API TIPS](#) document and the "Etiquette" section of this document. It will save you (and us) much heartburn.

# Good to remember...

You have three access levels to the API metadata:

- **Public.** Free, fully anonymous.
- **Polite.** Free, you provide your email (recommended).<sup>1</sup>
  - We only use this information to contact you in case of issues.
  - Include 'mailto' field in your API query.
- **Plus.** Premium service, you get:
  - A service level agreement guaranteeing you extra service and support, giving you a consistent and predictable experience.
  - Additional features such as snapshots and priority service/rate limits.

<sup>1</sup> We get rid of your information after 90 days.

# How to...?

We can send requests using a command line interface or pasting our queries in the web browser.

Alternatively, API clients are powerful tools to assist us in our data retrieval

You can also execute the queries directly in your web browser

POSTMAN

# Article to funder relationships

**Funders** Endpoints that expose funder related data

GET `/funders/{id}/works`

Returns list of works associated with the specified {id}.

## Queries

Free form search queries can be made, for example, works that include `renewar` or `ontologies` (or both):

`/works?query=renewar+ontologies`

## Field Queries

Field queries allow for queries that match only particular fields of metadata. For example, this query matches records that contain the tok

`/works?query.author=richard+feynman`

Field queries can be combined with the general `query` parameter and each other. Each query parameter is ANDed with the others:

`/works?query.title=room+at+the+bottom&query.author=richard+feynman`

This endpoint supports the following field queries:

- `query.affiliation` - query contributor affiliations
- `query.author` - query author given and family names
- `query.bibliographic` - query bibliographic information, useful for citation look up, includes titles, authors, ISSNs and publication years
- `query.chair` - query chair given and family names
- `query.container-title` - query container title aka. publication name
- `query.contributor` - query author, editor, chair and translator given and family names
- `query.degree` - query degree
- `query.description` - query description
- `query.editor` - query editor given and family names
- `query.event-acronym` - query acronym of the event
- `query.event-location` - query location of the event
- `query.event-name` - query name of the event
- `query.event-sponsor` - query sponsor of the event
- `query.event-theme` - query theme of the event
- `query.funder-name` - query name of the funder
- `query.publisher-location` - query location of the publisher
- `query.publisher-name` - query publisher name
- `query.standards-body-acronym` - query acronym of the standards body
- `query.standards-body-name` - query standards body name
- `query.title` - query title
- `query.translator` - query translator given and family names

# PRODUCT DEMO #5

- Building the Research Nexus
    - Viewing and using Retraction Watch data via the Crossref Labs API
    - Martin Eve, Rachael Lammey, Crossref
- 

# Retraction Watch & Crossref

*12th September 2023* — The Center for Scientific Integrity, the organisation behind the Retraction Watch blog and database, and Crossref, the global infrastructure underpinning research communications, both not-for-profits, announced today that the Retraction Watch database has been acquired by Crossref and made a public resource. An agreement between the two organisations will allow Retraction Watch to keep the data populated on an ongoing basis and always open, alongside publishers registering their retraction notices directly with Crossref.

<https://doi.org/10.13003/c23rw1d9>

# What kind of things can I do with the data?

- Build interfaces, tools and services or add functionality existing tools
- Notify: streamline existing workflows and build new ones
- Research the research

The use cases above can only be enabled with comprehensive, high quality, open data on retractions.

# Retraction Watch & Crossref

- The full dataset has been released through Crossref's Labs API, initially as a .csv file to download directly: <https://api.labs.crossref.org/data/retractionwatch?name@email.org> (add your 'mailto').
- The Crossref Labs API also displays information about retractions in the `/works/` route when metadata is available, such as <https://api.labs.crossref.org/works/10.2147/CMAR.S324920?name@email.org> (add your 'mailto'). We'd recommend using a .json viewer to look at the information using a browser.

# PRODUCT DEMO #6

- Building the Research Nexus
    - What does preservation look like for Crossref members and how can we support it?
    - Martin Eve, Crossref
- 

# PRODUCT DEMO #7

- Building the Research Nexus
    - Introducing a tool for registering DOIs for static site generators
    - Esha Datta, Crossref
  - Repository  
(<https://gitlab.com/crossref/labs/static-page-id-generator/>)
- 

# PRODUCT DEMO #7

1. Track files in a static site git repository specified by the user
2. Generates unique id for tracked files which are turned into DOIs
  - For Crossref members
    - Features 1 & 2
    - Generates xml deposit files
    - Deposits the xml to Crossref
    - Registers the DOIs,
    - Adds DOIs back to the tracked files in question
  - For non-Crossref members
    - Only Feature 1 & 2
    - Plugin functionality will be in development soon
  - Demo video

# CROSSREF STRATEGY

# VISION

**Like others... we envision**

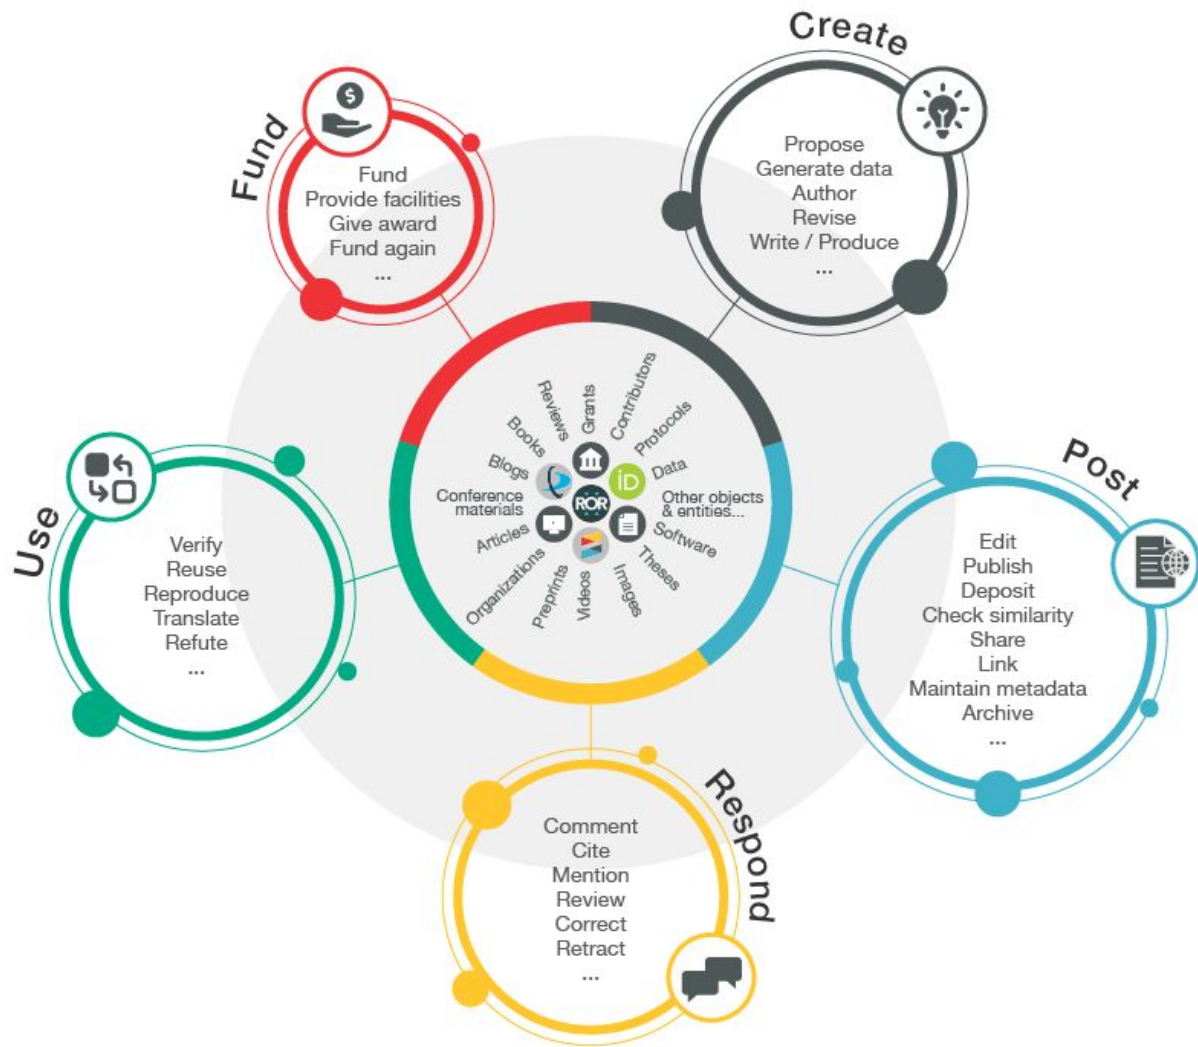

**“a rich and reusable open network of relationships connecting research organizations, people, things, and actions; a scholarly record that the global community can build on forever, for the benefit of society.”**

# MISSION

**Crossref makes research objects easy to find, cite, link, assess, and reuse.**

**We're a not-for-profit membership organization that exists to make scholarly communications better.**

# WHAT WE'RE AIMING FOR

- Bringing together the disparate parts of the scholarly record
- Better view of relationships (beyond PIDs)
- Exposing internal stuff publicly
- Enabling multi-party assertions
- Evidence. Provenance. Persistence.
- **60% of this is possible, the rest is aspirational**

<b>Records</b>	<b>As of Oct 2018</b>	<b>As of Oct 2023</b>	<b>% change</b>
Total records registered	100,774,749	151,255,483	50%
Number of Journals	62,226	123,336	98%
Number of Journal articles	73,957,459	102,775,406	105%
Number of Books	1,285,818	1,913,683	49%
Number of Book-related records	14,288,511	24,576,712	72%
Number of Conference proceedings	62,190	105,077	69%
Number of Conference papers	5,477,054	8,125,166	48%
Number of Preprints	79,084	1,637,103	1970%
Number of Reports	586,195	746,921	27%
Number of Peer reviews	13,456	421,782	3035%
Number of Standards	257,470	378,946	47%
Number of Components	3,454,155	7,865,443	128%
Number of Databases	21,806	63,926	193%
Number of Database-related records	1,704,946	2,919,950	71%
Number of Dissertations	240,407	618,951	157%
Number of Grants	6	87,259	1454217%

Growth slowing gradually over the years from 13% 7-8 years ago, to 10% 3-4 years ago, to now under 8% from 2022-23

Preprints still growing, particularly from American Association for Cancer Research (AACR)

Peer review reports also growing, this is typical growth the last few years

Grant records have more than doubled, thanks to the European Commission

<b>Research Nexus connections</b>	<b>As of Oct 2018</b>	<b>As of Oct 2023</b>	<b>% change</b>
Records with references	41,516,410	66,508,539	60%
Number of Cited-by matches	758,372,968	1,542,481,107	103%
Number of Preprint-to-article links	17,883	555,134	3004%
Number of unique records with Funder IDs	2,431,939	8,099,744	233%
Records with one or more authors with ORCID iDs	1,950,216	12,114,204	521%
Total unique ORCID iDs	1,293,649	6,093,373	371%
Total works auto-pushed to ORCID	1,363,337	16,256,452	1092%
Records with abstracts	2,707,893	26,814,551	890%
Records with ROR IDs	n/a	73,560	n/a
Records with Crossmark	7,747,598	25,013,338	223%
Crossmark status updates	93,223	267,583	187%
Crossmark retractions	4,477	14,004	213%
Crossmark popup displays (av. per month)			
<b>Research Nexus adoption</b>	<b>As of Oct 2018</b>	<b>As of Oct 2023</b>	<b>% change</b>
Members registering references	4,636	10,158	119%
Members registering abstracts	3,645	22,312	512%
Members participating in Crossmark	324	516	59%
Members registering ORCID iDs	3,645	15,154	316%
Members registering ROR IDs	n/a	290	n/a
Members registering Funder IDs	746	2,161	190%

Preprint to article links rising

ORCID Auto-update going well. And we reached 3 million authors granting us permission

No. retractions still very small (compared to RW) and No. members using Crossmark still small

The I4OA message is starting to get traction. Wiley!

**ABS  
TRA  
CTS**

# OUR STRATEGY

Contribute to an environment where the community identifies and co-creates solutions for broad benefit

Publicly accountable to the Principles of Open Scholarly Infrastructure (POSI) practices of sustainability, insurance, and governance

A sustainable source of complete, open, and global scholarly metadata and relationships

Foster a strong team—because reliable infrastructure needs committed people who contribute to and realise the vision, and thrive doing it

## Recently completed

- [New form](#) for funders to register grant records
- Confirmed plans for [merging Funder Registry into ROR](#)
- Launched [Global Equitable Membership \(GEM\) program](#)
- [Acquired and opened Retraction Watch database](#); entered an agreement to grow the service together with Center for Scientific Integrity
- Reached our 12-month contingency fund goal
- Agreed and published our new [travel and events](#) policy

## Up next

- [Community consultation](#) regarding Crossmark
- Labs to [redevelop participation reports](#)
- 2024 all staff retreat
- Reviewing recruitment and compensation practices

## In focus

- Move from data center to cloud
- Identify [patterns in and match metadata](#)
- Adoption activities - top metadata priorities: references; abstracts; grants; ROR
- Deliver data citation via the relationships [API endpoint](#)
- 2022/3 POSI self-assessment update
- Project to assess how our resourcing supports sustainability
- Reviewing governance processes and board diversity

## Under consideration

- How do we best gather changes and notify changes to metadata?
- Monitoring research integrity community developments and tools
- Evaluate AI detection functionality

# AFFILIATIONS

“The Research Organization Registry (ROR) is a global, community-led registry of open persistent identifiers for research organizations. ROR makes it easy for anyone or any system to disambiguate institution names and connect research organizations to researchers and research outputs.”

# The Principles of Open Scholarly Infrastructure

*Trust must run strongly across each of the following areas: running the infrastructure (governance), funding it (sustainability), and preserving community ownership of it (insurance). In this spirit, we have drafted a set of design principles we think could support the creation of successful shared infrastructures.*

*Bilder G, Lin J, Neylon C (2015) Principles for Open Scholarly Infrastructure-v1  
<http://dx.doi.org/10.6084/m9.figshare.1314859>*

**Supporting Open Research**

Membership revenue growing, but at a slower rate

Content registration up again after slowing last year

Increase from GEM program

Expenses are still bouncing back from Covid, inflation

Increased hosting fees (AWS) and resumed travel

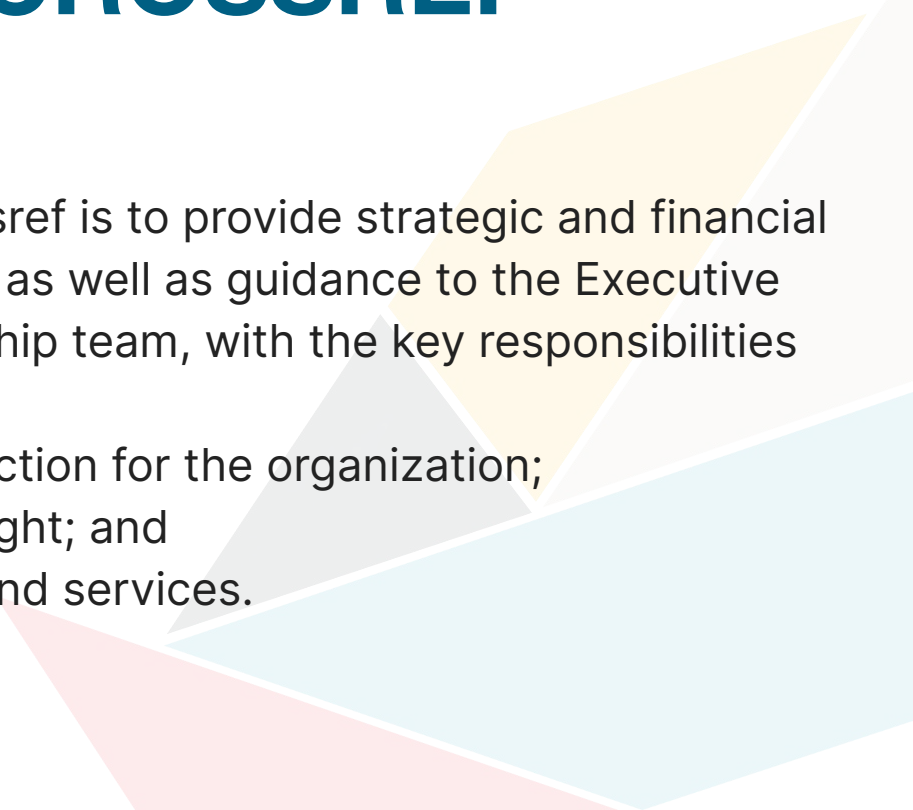

# OVERVIEW OF CROSSREF GOVERNANCE

- 501(c)6 organization, a trade association
- To be eligible for the Board, a Director must be an employee or officer of a member organization. Once a Director is elected, the member organization can appoint an alternate for such Director. Board seat belongs to the organization, not the individual.
- Board members serve 3-year terms and are eligible for reelection with no term limits
- Corporate officers (Chair and Treasurer) are elected by the board to serve one-year terms, for up to to three consecutive years
- All board members agree to a whistleblower policy and a conflicts of interest disclosure policy

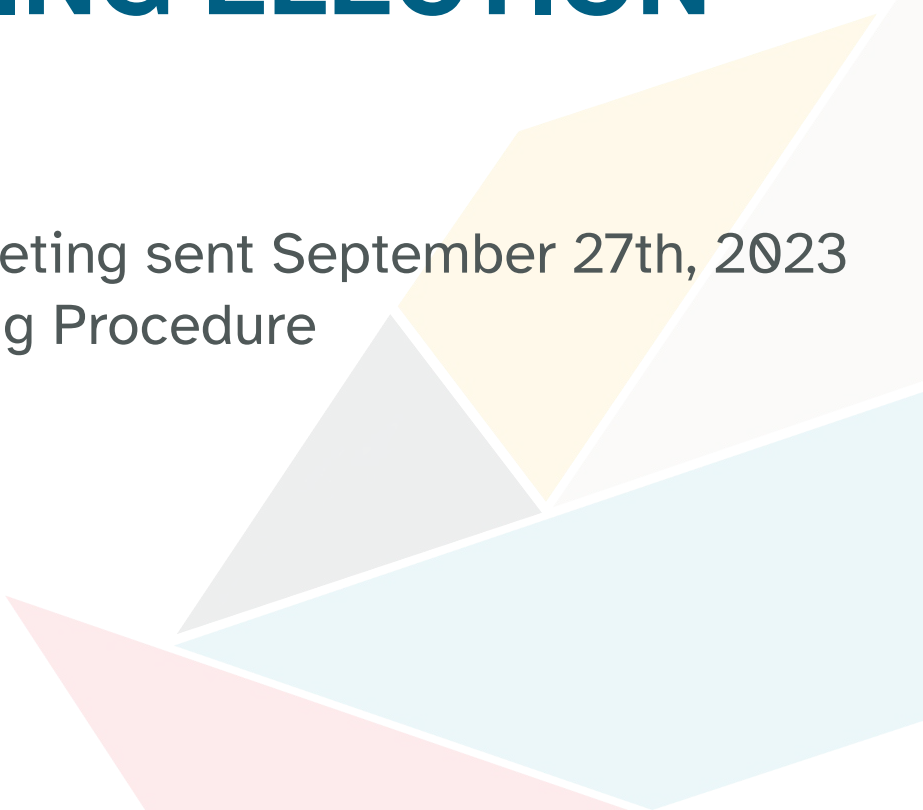

# OVERVIEW OF CROSSREF GOVERNANCE

The role of the board at Crossref is to provide strategic and financial oversight of the organization, as well as guidance to the Executive Director and the staff leadership team, with the key responsibilities being:

- Setting the strategic direction for the organization;
  - Providing financial oversight; and
  - Approving new policies and services.
- 

A stylized bird logo composed of several overlapping triangles in red, blue, yellow, and grey, positioned in the top left corner of the slide.

# ANNUAL MEETING ELECTION

- Notice of Annual meeting sent September 27th, 2023
  - Review of Nominating Procedure
- 
- A series of overlapping, semi-transparent geometric shapes in shades of yellow, grey, light blue, and pink, located in the bottom right corner of the slide.

# 2023 BOARD NOMINATIONS

## 2023 Nominating committee

- Aaron Wood, APA, chair\*
- Oscar Donde, Pan Africa Science Journal\*
- David Haber, American Society for Microbiology
- Rose L'Huillier, Elsevier\*
- Marie Soulière, Frontiers

\* indicates Crossref board member

# NOMINATION PROCESS

- Board composition review
- Public call for nominations
- 87 respondents
- Committee reviews and discussed candidates

Interested in next year? Stay tuned for the call for expressions of interest in April/May 2024

# 2023 Board slate

## Tier 1 candidates (electing five seats):

- Beilstein-Institut, Wendy Patterson
- Korean Council of Science Editors, Kihong Kim
- Lujosh Ventures Limited, Olu Joshua
- NISC Ltd, Mike Schramm
- OpenEdition, Marin Dacos
- Universidad Autónoma de Chile, Dr. Ivan Suazo
- Vilnius University, Vincas Grigas

## Tier 2 candidates (electing two seats):

- Association for Computing Machinery (ACM), Scott Delman
- Oxford University Press, James Phillpotts
- Public Library of Science (PLOS), Dan Shanahan
- University of Chicago Press, Ashley Towne

# 2023 Board election final results

## **Tier 1 candidates (electing five seats):**

# Enhancing Research Connections through Metadata: A Case Study with AGU and CHORUS

by Tara Packer (CHORUS), Sara Girard (CHORUS), Shelley Stall (AGU), Kristina Vrouwenvelder (AGU)

Through the use of open APIs CHORUS and AGU were able to discover and facilitate linkages between papers and related grants and datasets.

- **Methods:** We utilized ScholXplorer, DataCite, and Crossref as the primary sources for identifying and capturing datasets and software linked to papers and grants.
- **Deliverables:** CHORUS reports identified linked articles and associated metadata. AGU provided journal level reporting on data citations.
- **Results:** 91.73% increase in the number of datasets identified for AGU published content reporting on funded research, including NSF, since the project kicked off September 2020.
- **Conclusions:** Without proper linkages between papers and related grants and datasets, credit for dataset generation can't be achieved.

# FLASH TALKS

- Engjellushe Zenelaj, Reald University College

## INDEX CROSS REF, INTEGRITY, PROFESSIONAL AND INSTITUTIONAL DEVELOPMENT

**PhD. Engjellushe Zenelaj**  
Reald University College,  
Chief Editor of "Buletini Shkencor Reald"Albania

### Our Profile

Allow me to briefly describe the Cross Ref experience, which for a long time seemed impossible to me, but we have now resolved it. We are a small institution, a university college and moreover from a small country like Albania, and therefore our scientific publications are limited in number. However, this does not mean that we should not walk alongside new developments.

Kolegji Universitar REALD  
Adresa: Rruga "Zahir Pajaziti",  
Vlorë  
Telefon: (+355) 6820-32298  
E-mail:  
universitetireald@yahoo.com  
Web: www.unireald.edu.al

**Our Case scientific Journal**  
**Buletini Shkencor Reald**  
**ISSN : 2411-5592**

The index in cross Ref has been an institutional objective which has already been achieved and fulfilled. Collaboration and indexing has brought several benefits both at the institutional level and at the individual level for the academic staff.

Cross Ref indexing has made it possible for published works to be protected, safer, and more visible to other researchers. Also, this is very important for the progress of our scientific journal, as well as for its growth and internationalization.

## Results

Where we are now, and where we want to be

We are at Copernicus:  
<https://journals.indexcopernicus.com/search/details?id=125201>

We want to be at DOAJ  
And we are working for it...

Increased the standards, integrity

Our journal is indexed at Copernicus

Has been registered at Web of Sciences, is undervaluation

Has been increased the interest of authors for publication

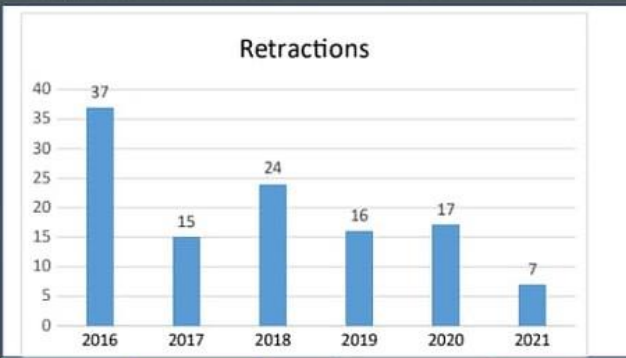

# FLASH TALKS

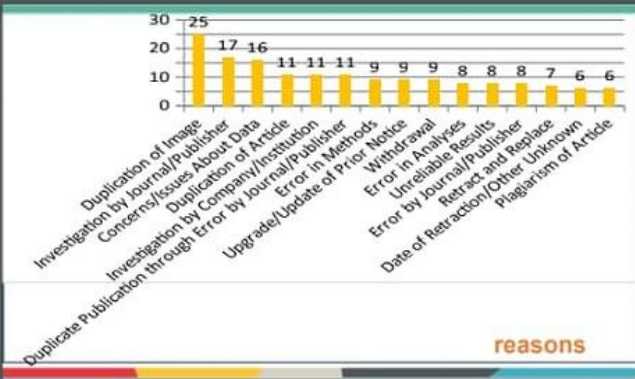

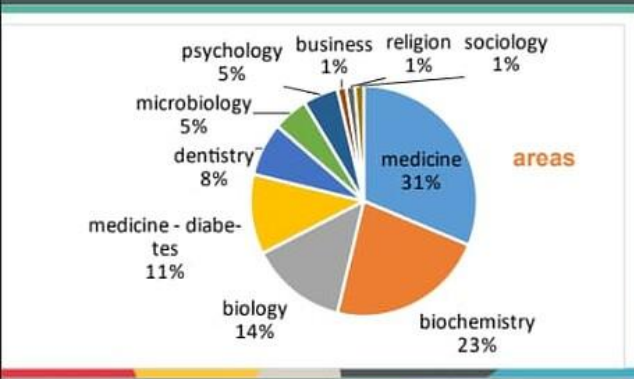

- Edilson Damasio, Maringá State University / Crossref Ambassador

- RWDB – platform acquired by Crossref, information all retractions 47k registers
- Methods:** Search Oct. 2021 Brazil / Retraction (2016-2021) – 116 articles Brazilian authors (coauthors).
- Results:** The main publications area is Medicine, Biochemistry, Biology, Medicine-Diabetes, Dentistry, Microbiology, Psychology, Religion, and others.

Retraction ID	Retraction Title	Author	Journal	Year	Reason
10.1002/ajb.1311	Investigation of the effects of...	Edilson Damasio	Journal of Biogeography	2016	Duplication of Image
10.1002/ajb.1312	Investigation of the effects of...	Edilson Damasio	Journal of Biogeography	2017	Investigation by Journal/Publisher
10.1002/ajb.1313	Investigation of the effects of...	Edilson Damasio	Journal of Biogeography	2018	Concerns/Issues About Data
10.1002/ajb.1314	Investigation of the effects of...	Edilson Damasio	Journal of Biogeography	2019	Duplication of Article
10.1002/ajb.1315	Investigation of the effects of...	Edilson Damasio	Journal of Biogeography	2020	Duplicate Publication through Error by Journal/Publisher
10.1002/ajb.1316	Investigation of the effects of...	Edilson Damasio	Journal of Biogeography	2021	Investigation by Company/Institution

A number of 276 reasons distributed at the top 5. 'Duplication of Image', 'Investigation by Journal/Publisher', 'Concerns/Issues About Data', 'Duplication of Article', 'Duplicate Publication through Error by Journal/Publisher', 'Investigation by Company/Institution'.

**Conclusion:** The highest number of retractions by Brazilian authors are related areas of Medicine and Biology, followed by Humanities and Social with a reduced number. The reasons was Duplication (images, articles, and journal error), from Investigation by (journal/publisher, company/institution), followed by Error in (methods, analyses, data, images, results). Fabrication, Falsification and Plagiarism (FFP) and Data issues were low.

# FLASH TALKS

- Joann Fogleson, American Society of Civil Engineers

**Now that you've  
published, what  
do you do with  
Metadata?**

Joann Fogleson  
Director, Publishing Technologies  
American Society of Civil Engineers  
[jfogleson@asce.org](mailto:jfogleson@asce.org)

## **Abstract**

Like a flower, metadata serves as a supporting structure or framework for the data. It provides additional context, description, and information about the data it accompanies, much like the petals and leaves of a flower enhance and complement its central part, the bloom. By sharing metadata, different stakeholders can gain a better understanding of the data and its context. This enables efficient data integration, analysis, and decision-making processes. Just as sharing a flower can spread its fragrance and beauty, sharing metadata helps spread knowledge and insights derived from the data. When metadata is shared, it becomes a valuable resource for others to discover and access relevant data. Sharing metadata can foster the discovery of related or interconnected data sets, enabling further exploration and understanding. Data governance and management, sharing metadata promotes transparency and accountability. It allows for tracking the origin, lineage, and usage of data, facilitating compliance, auditability, and data quality assurance. Like sharing a flower, sharing metadata fosters trust and collaboration among individuals and organizations.

# Planning your garden – think like a pollinator.

**Go Native.** Pollinators are "best" adapted to local, native plants, which often need less water than ornamentals.

**Bee Showy.** Flowers should bloom in your garden throughout the growing season. Plant willow, currant, and Oregon grape for spring and aster, rabbit bush and goldenrod for fall flowers.

**Bee Bountiful.** Plant big patches of each plant species (better foraging efficiency.)

**Bee Patient.** It takes time for native plants to grow and for pollinators to find your garden, especially if you live far from wild lands.

**Bee Gentle.** Most bees will avoid stinging and use that behavior only in self-defense. Male bees do not sting.

**Bee Chemical Free.** Pesticides and herbicides kill pollinators.

**Bee Honey.** Make small piles of branches to attach chrysalis or cocoons. Provide hollow twigs, rotten logs with wood-boring beetle holes and bunchgrasses and leaf stumps, old rodent burrows, and fallen plant material for nesting bees. Leave dead or dying trees for woodpeckers.

**Bee Sunny.** Provide areas with sunny, bare soil that's dry and well-drained, preferably with south-facing slopes.

**Bee Friendly.** Create pollinator-friendly gardens both at home, at schools and in public parks. Help people learn more about pollinators and native plants.

**Bee Diverse.** Plant a diversity of flowering species with abundant pollen and nectar and specific plants for feeding butterfly and moth caterpillars.

**Bee a little messy.** Most of our native bee species (70%) nest underground so avoid using weed cloth or heavy mulch.

**Bee Aware.** Observe pollinators when you walk outside in nature. Notice which flowers attract bumble bees or solitary bees, and which attract butterflies.

# How a publisher pollinates with metadata

- Registering DOIs
- MAI Taxonomy
- Metadata deposits
- Allowing search engine (such as Google Scholar) to crawl site
- MARC record creations
- KBART
- Excel Sheets
- Marketing campaigns and advertising
- Social media
- Review copies
- Book tours
- Press Releases
- Keep metadata current
- Citations
- SEO
- PID (persistent identifier)
- XML
- BITS/JATS/STS
- CRediT taxonomy
- In-house depository
- Platform reporting
- Accessible metadata
- Portico
- CLOCKSS

Search Engine Optimization (SEO) is important for scholarly publication metadata for several reasons:

1. Increased Discoverability
2. Relevance in Academic Databases
3. Citation Impact
4. International Reach
5. Promotion of Open Access
6. Enhanced User Experience
7. Funding and Collaboration Opportunities
8. Tracking and Analytics

SEO for scholarly publication metadata helps by increasing visibility, citations, and the impact of research.

The Dublin Core™ Metadata Initiative, or "DCMI",

Dublin Core is an international metadata standard that consists of 15 terms for describing digital or physical resources.

These terms include creator, title, date, subject, and publisher.

Dublin Core is used to describe a variety of digital materials, such as video, sound, image, text, and web pages.

It is one of the most widely used metadata standards.

The Dublin Core Metadata Initiative (DCMI) is responsible for formulating Dublin Core.

The first Dublin Core properties were defined in 1995 at the Metadata Workshop in Dublin, Ohio.

Dublin Core is defined by ISO in 2003 ISO Standard 15836, and NISO Standard Z39. 85-2007.

Dublin Core is a basic, domain-agnostic standard that can be easily understood and implemented. It is used to expand cataloging information and improve document indexing for search engine programs

<https://www.dublincore.org/specifications/dublin-core/dces/>

# PID

A persistent identifier (PID) is a long-lasting reference to a digital object, such as a document, file, web page, or other digital object.

Most PIDs have a unique identifier that's linked to the current address of the metadata or content.

PIDs can eliminate name ambiguity and point persistently to the location of a digital object.

## Examples of PIDs:

**International Standard Serial Number (ISSN)** is among the most well-known PIDs, ISSNs are unique identifiers for serial publications, including scholarly journals and magazines, managed by The International Centre for the registration of serial publications (CIEPS).

**DOI (Digital Object Identifier)** is a persistent identifier that's used to locate specific digital objects, often a journal article.

**Permalinks** are URLs that are intended to remain the same, limiting the amount of URL changes that can render objects unfindable. These links are often short and easy for people to type. These URLs need to be actively maintained to continue to be persistent. See the links below for more information about each service.

**ORCID** provides a persistent digital identifier for researchers that distinguishes you from every other researcher and supports automated linkages between you and your professional activities ensuring that your work is recognized.

**GrantID** is an identity management solution that adds security to apps with single sign on, multiple authentication factors, and analytics. It's fully compliant with the OAuth 2.0 and OpenId connect specifications.

A **funder ID** is an identifier for an organization that funds research in the Crossref registry. FundRef, facilitated by CrossRef, is a collaborative project of publishers and funding agencies that supports a way of reporting funding for research.

Examples of PIDs continued:

ROR "Research Organization Registry" is a global, community-led registry of open persistent identifiers for research organizations. Crossref and ROR are working together to make it easier for members to integrate identifiers, register metadata, and connect research outputs to funders.

A Ringgold Identifier (Ringgold ID or RIN) is a unique numeric identifier for organizations in the publishing industry supply chain. It's a persistent identifier (PID) applied to organizations in the scholarly communications sector  
National Library of Medicine's Medical Subject Headings (MeSH), is a controlled vocabulary thesaurus created and updated by the United States National Library of Medicine (NLM) Ringgold is a subsidiary of Copyright Clearance Center (CCC)

DataCite is a global, non-profit organization that provides digital object identifiers (DOIs) for research data and other research outputs. DataCite's mission is to make data and scholarly content more accessible and citable. DataCite was founded in 2009 to make research data citable in the literature using DOIs

## Persistent archive

Portico or CLOCKSS, both of which are dark archives meaning the content submitted to them will only release in the case of a “trigger event,” such as confirmation that a journal is no longer in publication. Archiving will ensure your journal content remains available in perpetuity, even if you have to cease publishing, and it enables Crossref to work with archives to ensure your DOIs continue to resolve to your content,

## Metadata Management Plan

- Verify PIDs when possible
- Data inventory
- Data enrichment
- Data lineage (a historical record of the data and its origins)
- Collaborative workflows
- Metadata exchange with third-party tools
- Security and privacy
- GDPR (General Data Protection Regulation)

# Accessible metadata

Accessible metadata helps users understand how to represent machine-readable metadata in a user-friendly User Interface / User Experience (UI/UX).

## Open Funder Registry to transition into Research Organization Registry (ROR)

[Amanda French](#), [Ginny Hendricks](#), [Rachael Lammey](#), [Fabienne Michaud](#), [Maria Gould](#) – 2023 September 07  
In [Open Funder Registry](#), [ROR](#), [Identifiers](#), [Metadata](#), [Research Funders](#)

Today, we are announcing a long-term plan to deprecate the [Open Funder Registry](#). For some time, we have understood that there is significant overlap between the Funder Registry and the [Research Organization Registry \(ROR\)](#), and funders and publishers have been asking us whether they should use Funder IDs or ROR IDs to identify funders. It has therefore become clear that **merging the two registries will make workflows more efficient and less confusing for all concerned.**

# Crossref - Aggregate ROR/Funder Registry Overlap

## Overlapping vs Non-overlapping Funder IDs<sup>1</sup>

19,338 / 35,414 total funders

## Overlapping vs Non-overlapping Assertions<sup>2</sup>

12,688,389 / 13,479,466 total assertions

Crossref Overlap Analysis

1. Total number of Funder IDs that have been mapped to ROR IDs.
2. Total number of assertions where the Funder ID is mapped to a ROR ID.

[Download unmapped funders as CSV](#)

[Download mapped funders as CSV](#)

ROR has been working to reconcile the two registries since mid-2022.

There is a corresponding ROR ID for **over 94%** of Funder ID assertions in Crossref DOI records.

# Crossref Member - ROR/Funder Registry Overlap

[rorfunderregistryoverlap.streamlit.app](http://rorfunderregistryoverlap.streamlit.app)

Enter Member Name:

Oxford University Press (OUP) ▼

Show overlap

Overlapping vs Non-overlapping Funder IDs<sup>1</sup>

9,874 / 13,467 total funders

Overlapping vs Non-overlapping Assertions<sup>2</sup>

347,822 / 361,027 total assertions

1. Number of Funder IDs used in member assertions that have been mapped to ROR IDs.
2. Number of assertions by member where the Funder ID is mapped to a ROR ID

Download mapped funders as CSV

ROR has built a tool to compare the overlap in the two registries.

You can use the tool to look up the funding assertion overlap of Crossref members such as OUP.

# Funder Mapping Lookup

Enter Funder name:

Australian Research Council

Search

Funder ID	Funder Name	ROR ID	ROR Name
<a href="http://dx.doi.org/10.13039/501100000923">http://dx.doi.org/10.13039/501100000923</a>	Australian Research Council	<a href="https://ror.org/05mmh0f86">https://ror.org/05mmh0f86</a>	Australian Research Council

You can also use the tool to look up individual funders and find both the Crossref Funder ID and the ROR ID.

# ROR is ready!

Explainers

## How ROR and the Open Funder Registry Overlap: A Closer Look at the Data

By Amanda French, Adam Buttrick

October 12, 2023

Following on the announcement that Crossref's Open Funder Registry will be merging with ROR after 2024, we'd like to do a deep dive into the specifics of the evidence that ROR is ready to take on the important work that the Open Funder Registry has been doing: identifying research funders in a clean, consistent, comprehensive, and interoperable way.

Continue reading

It's never been more important to be able to clearly identify which organizations have funded which research.

ROR is ready to take on the work of identifying research funders.
